| FCC cautionary statement                               | <p><b>NOTE</b><br/>This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter. The available scientific evidence does not show that any health problems are associated with using low power wireless devices. There is no proof, however, that these low power wireless devices are absolutely safe. Low power wireless devices emit low levels of radio frequency energy (RF) in the microwave range while being used. Whereas high levels of RF can produce health effects (by heating tissue), exposure of low-level RF that does not produce heating effects causes no known adverse health effects. Many studies of low-level RF exposures have not found any biological effects. Some studies have suggested that some biological effects might occur, but such findings have not been confirmed by additional research.</p> <p>DZ-C100 has been tested and found to comply with FCC radiation exposure limits set forth for an uncontrolled environment and meets FCC radio frequency (RF) Exposure Guidelines.</p> |
